

## **California Rice Commission Liberty Link Sampling and Testing**

All commercial varieties of rice seed used for planting in the 2008 year are requested to be tested for Liberty Link traits.

Two 2.5 Kg (5.5 lbs) composite samples shall be drawn of each rice variety for sale as seed. One for testing and the other for a stored reference sample. Each variety shall be sampled as following -

- Less than 50 metric tons (1100 cwt) - 5 kg (11 lbs) bulk composite sample from 10 incremental samples
- 100 metric tons (2200 cwt) - 10 kg (22 lbs) bulk composite sample from 20 incremental samples
- 250 metric tons (5500 cwt) - 25 kg (55 lbs) bulk composite sample from 50 incremental samples
- 500 metric tons (11000 cwt) or greater - 50 kg (110 lbs) bulk composite sample from 100 incremental samples

From the above bulk composite sample, draw the 2 representative 2.5 kg (5.5 lbs) samples for testing and reference.

The two 2.5 Kg. (5.5 lbs.) samples shall be bagged and sealed in clean paper or plastic bags and taken to the Foundation Seed Program Warehouse, Hutchison Road, (1/2 mile west of Highway 113 on south side of road) University of California, Davis by **February 29, 2008**. (The warehouse is open M-F / 8:00am to 3:00pm).

A composite representative sample of all lots by variety will then be drawn and forwarded to the seed testing lab by the CCIA.

For information or assistance, call  
Bob Stewart 530-752-9826 or Timothy Blank 530- 7524-4854

---
